PROJECT 531-19-107: EXPAND BLOOD DRAW

FINDING OF NO SIGNIFICANT IMPACT

The U. S. Department of Veterans Affairs (DVA) assessed the potential impacts of the various efforts of construction associated with project 531-19-107: Expand Blood Draw at the DVA Medical Center in Boise, Idaho. An Environmental Impact Statement is not required because the project will have only minimal environmental impact. Construction activity will only have short-term impacts for staff and patients that are typical for interior remodels. Noise, dust, and vibrations are possible and will be dealt with according to the project-specific Infection Control Risk Assessment.

The intent of Project 531-19-107 is to redesign and expand the existing blood draw area (room 1108, B.85A) into the existing Men’s Locker Room (room 115/115A, B.77). The locker room is no longer needed and will help to add additional square footage and draw stations to the blood draw space which currently has 4 draw stations. At project completion, the area will have 6 draw stations and 1 updated bathroom.

Copies of the Environmental Assessment (EA) are available for public review at the DVA Medical Center in Boise, Idaho. Direct any questions or requests for single copies of the EA to:
